## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-7 and 10-13 are rejected under 35 U.S.C. 102(e) as being anticipated by Herlinger et al. (US 6,537,099).

Herlinger et al. disclose a one piece molding housing comprise :

a body (12);

a complementary connector (12);

a locking member (28) having a locking arm (40), a bridge (38), a handle (52);

a blocking member (30) integrally pivotally connected to the body via hinge (31)

and having a wall (62), a first shape (58);

the first shape is a slot (an under cut groove formed by the barb, see Figure 4)

snap-fastening to a second tab shape (68);

the blocking member extends over entire width of the body in blocking position.

Herlinger et al. substantially disclose the claimed invention except it is for using with a coaxial contact element.

Art Unit: 2833

It has been held that a recitation with respect to the manner in which a claimed apparatus is intended to be employed does not differentiate the claimed apparatus from a prior art apparatus satisfying the claimed structural limitation. *Ex Parte Masham, 2 USPQ2d 1647 (1987)*.

### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Herlinger et al. (US 6,537,099).

Herlinger et al. substantially disclose the claim invention except for the blocking is pivoting about an axis parallel to the longitudinal axis of the locking member.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to rearrange the blocking member to pivot parallel to the longitudinal axis, since it has been held that rearranging parts of an invention involves only routine skill in the art.
